

Plexaderm®

3-Step Skincare Routine

Question: How soon do I need to use the product after it's opened?

Answer: Once opened the products should be used within 12 months. We recommend keeping Plexaderm products capped between uses to maximize shelf-life.

Question: How long do the Plexaderm results last?

Answer: In a 17-person test when image analysis was used, temporary improvement continued to be seen for up to 10 hours. Plexaderm works best when applied to clean and dry skin. Allow at least 8-10 minutes for Plexaderm to set before applying anything over it.

Question: How much Rapid Reduction Serum should I use for one application?

Answer: We suggest using a drop about half the size of a pea, which should be enough to apply under both eyes. However, everyone's skin is different, so if you notice the effects to be too strong, simply reduce the amount of formula to a level that works best for you.

Question: What is the best time of day to apply Plexaderm?

Answer: Plexaderm Rapid Reduction Serum can be used any time of day. Use a fresh pad before each application of Rapid Reduction Serum to completely remove any build-up of dirt, oil, and makeup.

Question: Why am I getting a white residue?

Answer: If you are getting a white residue around the application area it usually indicates that you have used too much Rapid Reduction Serum. Excess residue can be easily removed by gently tapping the area with a damp cloth or cotton ball.

Question: Can you apply makeup over this product?

Answer: Eyeshadows, liner, mascara and blush are all good products to use with Plexaderm. If liquid foundation is a must then try to avoid areas where Plexaderm has been applied since many of the oils and other ingredients in makeup will lessen the effects. If you feel you must use foundation on top of Plexaderm, stick to water-based products and apply very lightly over Plexaderm after it dries.

Question: Does Plexaderm Rapid Reduction Serum work on other parts of the face and neck?

Answer: Yes, Plexaderm Rapid Reduction Serum can be applied to all areas of the face and neck.

Question: Can Plexaderm Rapid Reduction Serum be used on the sagging upper eye skin as well?

Answer: Caution should always be taken when using any beauty product around the eyes. That area is sensitive and we do not recommend applying Plexaderm Rapid Reduction Serum on your eyelid.

Question: Does Plexaderm work on darker skin?

Answer: Yes, with proper application, Plexaderm Rapid Reduction Serum works on all skin tones.

Question: Does Plexaderm contain Retinol?

Answer: No, none of the products in the Plexaderm 3-Step Skincare Routine contain Retinol.

Question: What are the ingredients in Plexaderm?

Answer:

Reset & Replenish Pads Ingredients: Purified Water, Cyclopentasiloxane, Cetearyl Isononanoate, Polysorbate 20, Sodium Hyaluronate, Glyceryl Stearate, Ceteareth-20, Cetearyl Alcohol, Ceteareth-12, Cetyl Palmitate, Sodium Lauryl Glucose Carboxylate, Lauryl Glucoside, Phenoxyethanol, Caprylyl Glycol, Citric Acid, Potassium Sorbate, Sodium Benzoate.

Plex-Perfect Daily Moisturizer Ingredients: Purified Water, Glyceryl Stearate, Caprylic/ Capric Triglyceride, Glycerin, Cetearyl Alcohol, Ceteareth-20, Hydrolyzed Jojoba Esters, Sodium Hyaluronate, Cucumis Sativus (Cucumber) Fruit Extract, Hydrogenated Lecithin, Cetyl Alcohol, Stearic Acid, Beeswax, Microcrystalline Wax, Betaine, Ceramide NP, Phytosphingosine, N-Acetyl Glucosamine, Xanthan Gum, Magnesium Aluminum Silicate, Phenoxyethanol, Ethylhexylglycerin.

Rapid Reduction Serum Ingredients: Purified Water (Aqua), Propylene Glycol, Sodium Silicate, Magnesium Aluminum Silicate, Acetyl Hexapeptide-8, Hydrolyzed Rice Protein, Soluble Collagen, Cellulose Gum, Xanthan Gum, Titanium Dioxide, CI 77491, CI 77492, Phenoxyethanol, Ethylhexylglycerin.

Question: Is Plexaderm absorbed by the skin or does it sit on the surface?

Answer: Plexaderm Rapid Reduction Serum works by creating an invisible layer on the surface of your skin that temporarily reduces the appearance of under-eye bags and wrinkles.

Question: Will my problem areas get better over time?

Answer: Plexaderm Rapid Reduction Serum results are temporary. After the product is washed off your skin should return to the same condition it was in prior to application.

Question: How long does one kit last?

Answer: Each kit is approximately a 30-day supply when used daily. The pads come in a 50-count container, the Moisturizer is 30 mL, and the Rapid Reduction Serum contains 5mL which is enough for about 30 applications around each eye.

Question: My pump doesn't seem to be working. Is my bottle empty?

Answer: If the pump has never been used before it just needs to be properly primed. Using your thumb, slowly and firmly push the pump down until it cannot go any further. Continue pushing down the pump another 10-15 times until product begins to flow. Sometimes it can take longer so be patient.

Question: Why do my wrinkles look worse?

Answer: If you do not apply Plexaderm Rapid Reduction Serum evenly, or use too much in one particular area, it can temporarily overtighten the skin creating the appearance of more wrinkles. If this happens simply wash the product off and start over.

Question: Why does it feel like the product is drying my skin?

Answer: Plexaderm Rapid Reduction Serum works by creating a temporary tightening effect on the surface of the skin. It is not drying the skin, but it can feel that way to some users. Using the pads and moisturizer before applying Rapid Reduction Serum can help improve the comfort level on the skin without impacting results.

Question: Why is Plexaderm irritating my skin?

Answer: If you are experiencing sensitivity or irritation you should discontinue use immediately.
