The Prime Dent Self-Cure Composite Kit is a highly filled, non-sticky material that's ideal for anterior and posterior composite fillings. Its universal shade and paste/paste system make it easy to use. The material has high strength (270 MPa compressive) with low water sorption and solubility, allowing it to be condensed into cavities or used as a base layer. It sets quickly, eliminating the need for incremental placement of light-cure materials. The kit includes 15g catalyst paste, 15g base paste, 3ml bonding resin, etchant liquid, and accessories. With an expiration date of September 2026 or later, this product is designed to provide a convenient and effective solution for dentists and dental professionals.
